REPORT NO

- 25X1

  On 20 September 1955, the Ministry for General Machine Construction and the Ministry for Heavy Machine Construction sent form letters to all plants under their jurisdiction that are engaged in production of electro-technical products. The form letter stated that Minister for General Machine Construction Helmut Munderlich and Minister for Heavy Machine Construction Erich Apel had ordered the Work Circle for Electro-Technology to draft a special immediate action plan designed to ensure delivery on schedule of necessary materials, of the proper quality and in the proper quantity, to all East German enterprises which produce electro-technical products.
- In compliance with the orders of the two Ministers, the Work Circle for Electro-Technology drew up a questionnaire which was submitted to, and approved by, the State Central Administration for Statistics. The questionnaire contained of all raw materials needed for electro-technical production.
- 3. The individual plants to which the form letter was addressed were ordered to letermine the quantity and quality of raw materials included in the list which would be needed for 1956 production. In addition, the plants were ordered to draft long-range plans for 1957 through 1960, the remaining four years of the Second Five-Year Plan. The questionnaires were to be filled out in triplicate by the various plants and turned in to the Main Administration to which the plant is responsible by 28 September 1955. The form letter emphasizes that only those raw materials which are components of the electrical function of electro-technical products, and not those products needed for the construc25X1 of housings and the like, should be listed.
- 4. The questionnaires were to be completed by the Main Administration for Redio and Telecommunications Technology, the Main Administration for Cables, the Main Administration for Electrical Machine Construction and the Main Administration for Electrical Equipment for Vehicles by 28 September 1955 so that it woul 25X1 possible to coordinate them.
- 5. The completed questionnaires are to be coordinated on the Main Administration level by specialists in the Work Circles. Coordinated and consolidated lists of required materials will then be submitted to the State Planning Commission, 25X1
